

C.H.I.C and NP SUPRA:

The range of concealed hardware for sash and tilt-and-turn windows.

- The world of the Aluminium casement window is evolving towards an aesthetically and technologically advanced window, the ultra slim profiles and concealed hardware. The fact that the dimensions of sash and frame profiles can be reduced to the bare minimum signals a move toward a more modern, architecturally innovative aesthetic, but it also means more daylight and improved thermal performance, thanks to the wider expanse of glass occupying the same size of sash.
- C.H.I.C. is the **GIESSE** concealed hinge system for windows that features a 180° opening, a maximum load capacity of 100kg. Concealed hinges eliminate the requirement for coloured finishes.
- C.H.I.C. is offered in conjunction with NP Supra, which combines the simplicity of a cremone with the looks of a casement window handle.
